PERSONAL INFORMATION

A Computer Science undergraduate at Zhejiang University of Science and Technology with a strong pull toward the tech industry, particularly Artificial Intelligence, Cloud computing, and IT more broadly. I'm eager to keep learning and to take in perspectives different from my own, and I see this opportunity as a chance to gain real work experience and build a strong foundation for my future career.

PROJECTS

FRIDAY - Local AI Assistant (Personal Project)

June 2026 - Present

Python, Ollama, Electron, Kotlin - 147 Python files, ~35,000 lines

- Designed a multi-agent architecture with deterministic capability routing across agents for system control, files, RAG, camera, app launching, finance, and tasks, and built a standalone routing evaluator (side-effect-free agent/capability interception) to benchmark it, achieved 80% accuracy across 60 realistic commands and identified two systemic bugs: a fallback agent over-capturing single-intent commands, and keyword-collision fast-path mismatches ("bluetooth," "gmail," "FRIDAY").
- Debugged real runtime bugs: routing/validation failures, a streaming push_token_fn error, null monitoring stats, and wake-word false positives/negatives.
- Developed fallback and validation logic so unreliable or hallucinated AI output never directly drives critical operations, and optimized runtime performance (latency, TTS, CPU/RAM/GPU) with custom monitoring tooling.
- Integrated external APIs (weather, news, maps, Home Assistant, Gmail, n8n) via REST/webhooks.
- Implemented a companion Android client (Kotlin, Android Studio) with chat, dashboard, notepad, and NotificationListener integration.

Workflow Automation with n8n (Personal Project)

June 2026 - Present

Docker, REST APIs, Webhooks, Gmail API

- Deployed Docker-hosted n8n workflows integrating Gmail, webhooks, and external APIs to automate notification and labelling processing.
 - Debugged Gmail integration issues: node failures, connection errors, and batch-processing bugs.
-

EXPERIENCES

Tour Guide

March - April 2026

- Facilitated communication between Indonesian visitors and Chinese locals
- Resolved an unexpected itinerary disruption in real time, adapting the route to keep the group's schedule on track and maintain visitor satisfaction.

Music Director & Band Leader

Sep 2019 - May 2026

- Composed and arranged parts for an 8-10 member group and directed regular live performances, taking sole ownership of arrangement decisions across the group's repertoire.
- Strengthened teamwork and communication by aligning members toward shared performance goals and resolving coordination issues.

SKILLS

- **Languages:** Bahasa Indonesia (Native), English (Fluent), Mandarin (Proficient).
 - **Technical:** Python, Java, C++, C, Kotlin, SQL, JavaScript
 - **Soft Skills:** Problem Solving Skills, Critical & Analytical Thinking, Communication skills, Team Player.
-

EDUCATION

Zhejiang University of Science and Technology - Hangzhou, Zhejiang, China

Bachelor of Engineering - Computer Science

GPA: 3.5

September 2023 - June 2027
